* Users can create and use "Search Clusters".
A search Cluster is a list of URL, and for each URL one or more crawling strategies. (scrappin).

default
- → All content (textual) and the links with it
- → Only text files. → content not the actual file.
- → only PDF files.
- → All Non-Html text content
- → All PPt files.

New Crawling strategies can be added by the admin as a plugin.
(Additional with plugin)

* Eg. Grade - 7 (Cluster)
  - L1 → www.penguinbook.com → only PDFs.
  - L2 → www.thedailystar.net → All content.
  - L3 → www.Prothom Alo.com → All PDF
    → All MS Word

Max depth from user.

Depth (3)

L1, L2, L3 → Depth 0.

L1 L2 L3, L1 L2, L1 L2 → Dep 2

⋮ ⋮ ⋮

Collect the data from each depth in text form using the given Crawling strategies.

* Writing a Crawling Strategy

↳ Write API documentation, so that other developers can make another crawling strategy and upload it as a package. This package can be installed by the admin to provide the service to their customers.

↳ Harnessing Code.

* Searching (web) → (web scrapping)

→ Search text
→ Cluster Choose
  → All
  → One
  → More than One

Each user can use its own cluster. Other users can't use the cluster of another uses.

→ Batch Processing (framework) → Cluster Indexing
once done send email to user, then he can search.

Download

* Phone

User → Searching (web crawling)

Search Text — Cluster Selection

voice command.

* Results

→ Keyword in context with link
→ URL → HTTP or FTP
→ Index the crawled data → Scrapp the data. on database

→ Database for scrapping.

Master URL	URL	Depth	URL	Text (as per crawling strategy)	User Em

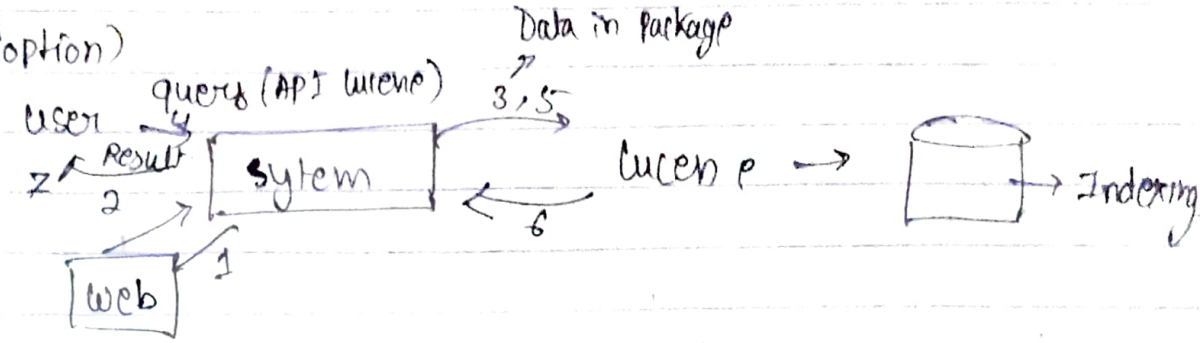
* Technologies can be used.

→ Apache Lucene (fast indexing
→ Django
→ React

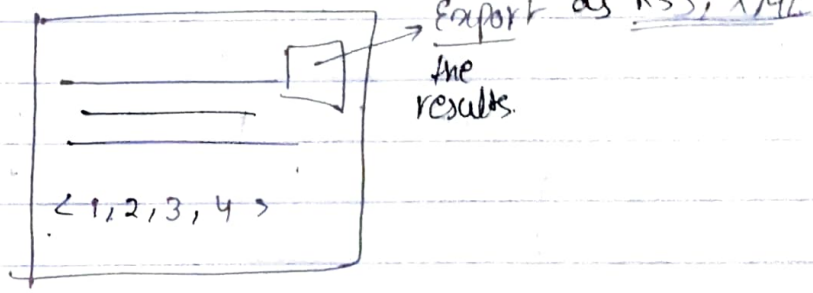
* Database

→ Data, Cluster Meta-data, Time of Cluster Creation, Cluster search strategy
→ Crawled Data (used Lucene)

* Lucene (option)



* Additional Functionality

~~Searchtext~~


→ Search.
